NOTE	<ol style="list-style-type: none"> All parameters NOT specially mentioned are measured at 230VAC input , rated load and 25°C ambient temperature . Ripple & Noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor . Tolerance: includes set up tolerance, line regulation and load regulation. Derating may be needed under low input voltages . Please check the static characteristics for more details . Only A type Safety and EMC design refer to EN60598-1 , subject 8750(UL) , CNS15233 , GB7000.1 , FCC part18. Length of set up time is measured at cold first start , Turning ON/OFF the power supply may lead to increase of the set up time The power supply is considered as a component that will be operated in combination with final equipment , Since EMC performance will be affected by the complete installation , the final equipment manufacturers must re-qualify EMC Directive on the complete installation again Refer to warranty statement .

■ DRIVING METHODES OF LED MODULE

There are two major kinds of LED driver method “Directive drive” and “with LED driver”

A typical LED power supply may either work in “constant voltage model (CV) or constant current model (CC)” to drive the LEDs .

RAGU’s LED power supply with CV+CC characteristic can be operated at both CV mode (with LED driver , at area(A) and CC mode(direct driver at area (B) .

Constant Current Mode

EFFICIENCY VS LOAD (48V model)

RG150 Series possess superior working efficiency that up to 94% can be reached in field applications .

DIMMING OPERATION (for T-type only)

- ◇ Built-in 3 in 1 dimming function , IP67 rated . Output constant current level can be adjusted through output cable by connecting a resistor or 1-10Vdc or 10V PWM signal between DIM+ and DIM-
- ◇ Please DO NOT connect "DIM-" to "-V" .

Refer to resistance value for output current adjustment (Typical) .

resistance value (KΩ)	10	20	30	40	50	60	70	80	90	100	OPEN
Percentage of rated current (%)	10	20	30	40	50	60	70	80	90	100	95~108

1~10V dimming function for output current adjustment (Typical)

Dimming value(V)	1	2	3	4	5	6	7	8	9	10	OPEN
Percentage of rated current (%)	10	20	30	40	50	60	70	80	90	100	95~108

10V PWM signal for output current adjustable (Typical) : Frequency range 100Hz~3KHz

Duty value(%)	10	20	30	40	50	60	70	80	90	100	OPEN

- ✧ Using the built-in dimming function on T-type model can't turn the lighting fixture totally dark . Please refer to the connection method below to achieve 0% brightness of the lighting fixture connection to the LED power supply unit .
- ✧ Direct connecting to LEDs is suggested , but is not suitable for using additional drivers .

Dimming connection diagram for turning the lighting fixture ON/OFF :

Using a switch and relay can turn ON/OFF the lighting fixture

1. Output constant current level can be adjusted through output cable by connecting a resistor or 1-10Vdc or PWM signal between DIM+ and DIM-

2. The LED lighting fixture can be turned ON/OFF by the switch .
